Professional Summary:

Applied Machine Learning Engineer with 3.5+ years of experience designing and deploying scalable NLP models, semantic search engines, and recommendation systems. Proficient in Python, PyTorch, scikit-learn, FastAPI, and Docker.

Technical Skills:

• Programming Languages: Python, SQL, C++, Bash
• ML & NLP: PyTorch, scikit-learn, Hugging Face, Transformers, spaCy, NLTK, Large Language Models (LLMs), Prompt Engineering, Fine-Tuning
• Backend & APIs: FastAPI, Flask, REST APIs, Microservices, SQLAlchemy
• Databases: PostgreSQL, Redis, Vector Databases, ChromaDB, Pinecone
• Cloud & DevOps: Docker, AWS (S3, EC2, SageMaker), Git, GitHub Actions, CI/CD, Linux

Work Experience:

Senior Applied ML Engineer | Cerebro AI Labs (2022 - Present)
• Developed and deployed high-throughput semantic search pipeline using Sentence Transformers and FastAPI, reducing query latency by 42%.
• Built automated document classification and entity extraction service using Hugging Face and PyTorch, processing over 500k documents monthly.
• Containerized NLP microservices using Docker and orchestrated deployments on AWS ECS.
• Designed PostgreSQL database schemas and optimized vector search indexing in Pinecone.

Machine Learning Developer | DataVibe Technologies (2020 - 2022)
• Built predictive customer churn classification models using scikit-learn and XGBoost, increasing retention by 18%.
• Engineered feature extraction pipelines with Pandas and NumPy for large-scale tabular and text datasets.
• Created RESTful APIs using Flask and Docker to serve real-time model inferences.

Education:

Bachelor of Technology (B.Tech) in Computer Science & Engineering
National Institute of Technology (NIT) | Graduated: 2020

Certifications:

• AWS Certified Machine Learning - Specialty
• Deep Learning Specialization (DeepLearning.AI)
